

green proposals

Map and register each and every one tree in the city of Heraklion

Provide scientific justification of any tree disease by sensitized professionals

No disease-affected tree should be cut before trying alternative, peaceful solutions

Punish uncivilized citizens that impose their violent behavior on the city green with ridiculous excuses such as: the trees are dirty, their roots will ruin my house - the branches will ruin my balcony, the tree is sick, the fruits are messing up my property, the leaves are dry, "I planted it - I cut it", the trunk will make a good lute, the tree is dry, Crete is green (meaning monoculture!), it will be replaced by another, "come on, you are overreacting" ect.

The Municipality must take a stand and act for the benefit of the trees and the oxygen they produce, which we ALL desperately need.

Tree pruning must at last become more organized and conducted at the appropriate season and with the correct method by experts.

We must all keep our eyes open and protect our trees NOW, starting from the one we have in our garden, our neighborhood, in the park, anywhere near us.

Trees are powerful and they have been trying to survive our violence for years.

Don't be passive when a tree is murdered!

Enough with society's indifference towards nature!

No tree should be the victim of any renovation or development scheme.

Renovations/constructions in the city should be conducted with respect to nature and the environment

Let's become more sensitized and sensitize others in issues of ecology.

We can ALL exist TOGETHER and HARMONIOUSLY
